Government assistance to industry-Great Britain: Parliament: House of Commons: Business, Innovation and Skills Committee 2011-02-18 This report from the Business, Innovation and Skills Committee concludes that while the Government has proposed a number of interventions which have the potential to help promote economic growth, it does not add up to a comprehensive growth strategy. The report highlights the fact that in the absence of clear performance measurements the Department for Business, Innovation and Skills' strategy runs the risk that economic success could mask failures in policy while economic hardship could overshadow excellent strategies or interventions. The report argues that different sectors of the economy have different requirements when it comes to government support and that the Department will have to develop a strong awareness of the needs of individual sectors and have the flexibility to react to them if we are to build capability across all sectors of the economy. While the Government's growth strategy appears to move in this direction, evidence from three sectors has shown that much work needs to be done. The banks' role in providing finance to business is crucial to the success of the economy. The report believes that the agreement struck between Government and the banks (Project Merlin) is a step in the right direction but the agreement must be shown to deliver real benefits to industry. If the economic recovery is to be sustained then both Government and banks need to move quickly from rhetoric to meaningful support to the private sector.

Interrogating Alteryty-Duncan Fuller 2016-05-06 Alternative ways of thinking, analysing and performing economic geographies have become increasingly significant in recent years, partly due to the recent financial crisis, which has had social and political consequences throughout the world. Yet there is a danger that the debate about alternatives may become simply a way of fixing global capitalism in its present crisis-ridden form. Instead, the analysis of alternative economic spaces must continue to offer a critique of the very notion of capitalism as a universal, if variable, set of social relations. This important book brings together critical analyses of alterity from across the social sciences and humanities, refining and advancing what alternative economies and polities are, how they are formed, what difficulties and problems they face, and how they might be sustained. A central theme is the need to examine critically both the material contexts and the conceptual categories deployed in the making of alternative economies.
